ACCENTURE 2026–2027 HIRING · ON-CAMPUS & OFF-CAMPUS

Accenture Complete Preparation Guide

Eligibility, roles and CTC, the full hiring process, a section-by-section syllabus, real candidate insights, worked examples and a 4-week study plan, all in one place. Valid for both on-campus and off-campus drives.

- Associate Software Engineer
- Advanced Associate Software Engineer
- Advanced Application Engineering
- System & Application Services Associate

4	45	3	7+1
Online assessments	Technical MCQs in 45 min	Coding problems in 60 min	Communication sections + email

Independent preparation guide · Not affiliated with or endorsed by Accenture

Edition: 2026–2027

01

OVERVIEW

Roles & Salary Package

Accenture hires freshers into different roles through the same assessment process. Your role and package depend on how well you perform. Strong scores in coding and technical rounds can move you into a higher-paying role.

ASE

Associate Software Engineer

₹4.19 – 4.64 LPA

Standard entry-level software role.

AASE

Advanced Associate Software Engineer

₹5.90 – 6.51 LPA

Higher package for strong coding performance.

AAE · High-Value

Advanced Application Engineering

₹11.18 LPA

Top-tier role for the best performers.

SASA

System & Application Services Associate

Package announced with notification

Role open to 3-year degree graduates.

Bond

No service bond has been mentioned for these roles. Location is **PAN India**.

02

WHO CAN APPLY

Eligibility Criteria

Role	Eligible Qualifications
ASE / Advanced ASE including Advanced Application Engineering	B.E. · B.Tech · M.E. · M.Tech · MCA · M.Sc
SASA System & Application Services Associate	3-year degree courses — Graduates of 3-year undergraduate programmes are eligible for this role.

Eligible batch: to be confirmed

This guide covers both **on-campus** and **off-campus** drives for 2026–2027. The exact eligible batch (pass-out year), branch list and academic criteria will be confirmed when hiring officially opens. Always check the official notification on the Accenture careers portal before applying.

STEP BY STEP

03 Hiring Process

The process has seven steps. Each step must be cleared before you move to the next one.

1. **Registration** — Apply online
2. **Mock Test** — 20 min · system check
3. **Behavioural & Cognitive** — 40 min
4. **Technical** — 45 Qs · 45 min
5. **Coding** — 3 Qs · 60 min
6. **Communication** — ~30 min
7. **Interview** — Final round

Exam Pattern at a Glance

Stage	Questions	Time	Elimination
Mock Assessment (system check)	—	20 min	No · but mandatory
Behavioural Assessment (psychometric)	54	20 min	No
Cognitive Assessment (gamified)	3 games	20 min	Yes
Technical Assessment	45	45 min	Yes · most elimination-heavy
Coding (Backend + SQL + Frontend)	3	60 min	Yes
Communication Assessment (7 sections A–G + email)	7 sections + email	~30 min	Yes
Final Interview	—	—	Final selection

How selection works

Each round has its own evaluation criteria. Selection is **individual-based, not relative**: your result does not depend on how other candidates score. Results are evaluated as you go.

What Each Step Means

Mock Assessment · 20 min

- **Mandatory**, but not scored for elimination.
- Checks that your hardware, software, webcam, microphone and internet work.
- Gets you familiar with the real test interface.

Assessment 1 · 40 min total

- **Behavioural:** personality, 54 questions in 20 min.
- **Cognitive:** gamified puzzles and number equations, 3 games in 20 min.

Assessment 2 · Technical · 45 min

- Common applications and MS Office
- Pseudocode
- Networking, Security and Cloud fundamentals
- Computer science basics (programming concepts)

Assessments 3 & 4 · Interview

- **Coding:** 3 questions (Backend, SQL, Frontend) in 60 min.
- **Communication:** separate email with login details and timeline. Tests verbal and written English.
- **Interview:** for candidates who clear every assessment.

SYLLABUS · ASSESSMENT 1

A Behavioural + Cognitive (Gamified)

A1. Psychometric / Behavioural

54 Questions · 20 min | No elimination

- Personality-based situational statements, answered on an **agree / disagree scale**.
- Scenarios about workplace behaviour, teamwork, integrity and adaptability.
- **Consistency checks:** the same trait is asked in different ways at different points in the test.

How to approach it

- Answer honestly and stay **consistent**. Contradicting answers to similar statements are easy to detect.
- Avoid extreme answers on every statement. Think about how a reliable, team-oriented professional would act.
- You have about 22 seconds per statement, so don't overthink.

A2. Gamified Cognitive

3 Games · 20 min | Elimination round

These games test **mental math speed, spatial reasoning and planning under time pressure**. According to a previous candidate, 3–4 people at their test centre were eliminated here.

1 Speed Arithmetic

Bubbles show expressions using addition, subtraction, multiplication and division. Work out each result and **select the bubbles in ascending order** of their values.

15 sec per question | ~25 questions

2 **Pathfinding Puzzle**

Change path directions and rotate or move tiles so the path reaches a target point.

~5 min per puzzle

3 **Grid Key Collection**

On a grid of about 10×10, collect every key and then reach the door. Plan the shortest route before you move.

~5 min ~10×10 grid

Worked example · Speed Arithmetic

Bubbles: `18 ÷ 3`, `4 × 2`, `15 − 11`, `2 + 3`

Values: 6, 8, 4, 5 → click in order: **15 − 11 (4) → 2 + 3 (5) → 18 ÷ 3 (6) → 4 × 2 (8)**

Tips for the games

- Practise mental math daily: tables up to 20, squares up to 25, quick division.
- In the puzzles, look at the whole board for a few seconds **before** making your first move.
- Time pressure is real. If you're stuck, make a reasonable move and keep going.

B

SYLLABUS · ASSESSMENT 2

Technical Assessment

QUESTIONS	DURATION	ELIMINATION
45	**45** min	**Highest**

This is the **most elimination-heavy round**. You get about one minute per question. All questions are multiple-choice, and **no pen and paper is allowed**.

Sub-section	Approx. Qs	Topics Covered
MS Office & Common Applications	7	Excel functions and formulas (VLOOKUP, IF, COUNTIF), Word formatting, PowerPoint features, output-based questions, shortcut keys
Pseudocode + OOPs	10	Bitwise operations (AND, OR, XOR, shifts), loops and nested loops, recursion tracing, string and array manipulation, OOPs concepts (inheritance, polymorphism, encapsulation, abstraction), 10–12 line logic-heavy code tracing
Networking, Security & Cloud	14	OSI and TCP/IP models, IP addressing basics, HTTP/HTTPS/DNS/DHCP, firewalls and VPN, encryption basics, malware types, cloud service models (IaaS/PaaS/SaaS), deployment models, DevOps basics (CI/CD, Git, Docker)
CS Fundamentals (Programming)	14	Data types and operators, control structures, functions, arrays and strings, basic data structures (stack, queue, linked list), searching and sorting basics, time complexity, DBMS basics

B1. MS Office Quick Reference

Must-know Excel formulas

- `=VLOOKUP(value, table, col_no, FALSE)` finds an exact match and returns the value from column *col_no*.
- `=IF(A1>=40, "Pass", "Fail")` returns one value if the condition is true, the other if it's false.
- `=COUNTIF(A1:A10, ">50")` counts the cells that meet a condition.
- `=SUMIF`, `=AVERAGE`, `=MAX`, `=MIN`, `=CONCATENATE`, `=LEN`
- Cell references: `A1` relative, `$A$1` absolute, `$A1` mixed.

Common shortcut keys

`Ctrl + Z / Y`	Undo / Redo
`F2`	Edit active cell (Excel)
`Alt + =`	AutoSum (Excel)
`Ctrl + ;`	Insert today's date (Excel)
`Ctrl + Shift + L`	Toggle filter (Excel)
`F5 / Shift + F5`	Slideshow from start / current slide
`Ctrl + E / L / R`	Center / left / right align (Word)

B2. Pseudocode & Bitwise: Worked Examples

Bitwise operators with x = 5, y = 3

Operation	Binary	Result
x & y AND	0101 & 0011 = 0001	1
x | y OR	0101 | 0011 = 0111	7
x ^ y XOR	0101 ^ 0011 = 0110	6
x << 1 left shift	0101 → 1010	10
x >> 1 right shift	0101 → 0010	2

Shortcut: x << n = x × 2^n, and x >> n = x ÷ 2^n (integer division).

Trace this: what is printed?

```
Integer a = 12, b = 10
a = a ^ b    // a = 0110 = 6
b = a ^ b    // b = 1100 = 12
a = a ^ b    // a = 1010 = 10
Print a, b
```

Output: 10 12. This is the XOR swap trick, and it comes up often in exams.

How to crack pseudocode without pen and paper

- Track only the variables that change. Update them line by line in your head.
- For loops, work out the **first two or three iterations**, spot the pattern, then jump to the end.
- Watch for `mod` (%), integer division, and whether a loop condition is < or <=.

B3. OOPs: The Four Pillars

Encapsulation

Bundling data and the methods that use it inside a class, and hiding internal details (private fields, getters and setters).

Abstraction

Showing only what's essential and hiding how it works, using abstract classes and interfaces.

Inheritance

A child class reuses the properties and methods of a parent class (an "is-a" relationship).

Polymorphism

One name, many forms. Overloading happens at compile time; overriding happens at runtime.

B4. Networking, Security & Cloud Cheat Sheet

OSI model, layer 7 down to 1

Application → Presentation → Session → Transport → Network → Data Link → Physical

Memory trick: "**A**ll **P**eople **S**eem **T**o **N**eed **D**ata **P**rocessing"

TCP/IP has 4 layers: Application, Transport, Internet and Network Access.

Common protocols and ports

HTTP · 80 | HTTPS · 443 | DNS · 53 | DHCP · 67/68 | FTP · 21 | SSH · 22 | SMTP · 25 | Telnet · 23

DNS turns domain names into IP addresses. DHCP gives devices an IP address automatically.

Security basics

- **Firewall** filters network traffic using rules. A **VPN** creates an encrypted tunnel.
- **Symmetric** encryption uses one shared key (AES). **Asymmetric** encryption uses a public and private key pair (RSA).
- **Malware types:** virus, worm, trojan, ransomware, spyware, adware.
- **Phishing** means fake messages that trick people into revealing data.

Cloud & DevOps

- **IaaS** rents infrastructure (AWS EC2). **PaaS** provides a platform to deploy on (Heroku, Google App Engine). **SaaS** is ready-to-use software (Gmail).
- **Deployment models:** public, private, hybrid, community.
- **CI/CD** automatically builds, tests and deploys code. **Git** handles version control. **Docker** runs apps in containers.

B5. CS Fundamentals: Time Complexity

Algorithm / Operation	Best	Average	Worst
Linear Search	O(1)	O(n)	O(n)
Binary Search (sorted array)	O(1)	O(log n)	O(log n)
Bubble / Insertion / Selection Sort	O(n)* / O(n) / O(n^2)	O(n^2)	O(n^2)
Merge Sort	O(n log n)	O(n log n)	O(n log n)
Quick Sort	O(n log n)	O(n log n)	O(n^2)

*Bubble sort is O(n) in the best case only with the "no swaps → stop early" optimisation. **Stack** is LIFO (last in, first out). **Queue** is FIFO (first in, first out).

C

SYLLABUS · ASSESSMENT 3

Coding + SQL + Frontend

QUESTIONS	DURATION	SUGGESTED SPLIT
3 (1 each)	**60** min	**25 · 15 · 20** min

You get one question each from Backend (DSA), Database (SQL) and Frontend. Spend about 25 minutes on DSA, 15 on SQL and 20 on Frontend, but start with whichever you're strongest at.

C1. Backend: DSA Coding

1 Question

Java · Python · C# · C++ · .NET

- **Level:** LeetCode Easy to Medium.
- **Topics:** arrays, strings, hashing, two pointers, basic recursion, sorting-based problems, number logic.

Important for Java users

The code template may contain a line like `throw new Exception(...)`. **Comment it out before running**, or your code won't run even if your logic is correct.

Language availability

The official list includes Java, .NET, Python, C++ and C#. One previous candidate saw only Java, Python and C# in their test, so be comfortable in at least one of those three.

Practice problems by topic

- **Arrays:** second largest element, move zeros to the end, rotate an array, max subarray sum
- **Strings:** palindrome check, reverse words, count vowels, anagram check
- **Hashing:** frequency count, first non-repeating character, two-sum
- **Two pointers:** pair with a target sum, remove duplicates from a sorted array
- **Number logic:** prime check, digit sum, Armstrong number, GCD/LCM

Example: Two-Sum with hashing (Python)

```
def two_sum(nums, target):
    seen = {}                  # value → index
    for i, x in enumerate(nums):
        if target - x in seen:
            return [seen[target - x], i]
        seen[x] = i
    return []
```

Runs in O(n) time instead of the brute-force O(n^2).

C2. Database: SQL 1 Question

What's asked

- `SELECT` with `WHERE`, `ORDER BY`, `GROUP BY`, `HAVING`
- **Joins (main focus):** INNER, LEFT, RIGHT, self-join
- Aggregates: `COUNT`, `SUM`, `AVG`, `MIN`, `MAX`
- `DISTINCT`, `LIMIT`, basic subqueries

Not asked: triggers | window functions | advanced SQL

Example: departments with more than 2 employees

```
SELECT d.dept_name, COUNT(e.emp_id) AS
total
FROM departments d
LEFT JOIN employees e
       ON e.dept_id = d.dept_id
GROUP BY d.dept_name
HAVING COUNT(e.emp_id) > 2
ORDER BY total DESC;
```

Join	Returns
INNER JOIN	Only the rows that match in both tables
LEFT JOIN	All rows from the left table, plus matches from the right (NULL where there's no match)
RIGHT JOIN	All rows from the right table, plus matches from the left
SELF JOIN	A table joined with itself, for example to find each employee's manager in the same table

Remember

`WHERE` filters rows **before** grouping. `HAVING` filters groups **after** `GROUP BY`. You can't use an aggregate like `COUNT()` inside `WHERE`.

C3. Frontend: HTML, CSS, JavaScript 1 Question

- Fix or complete the functionality in a given template, similar to the **HackerRank React certification** style.
- DOM manipulation, event handling, basic form validation.
- CSS selectors, flexbox basics, toggling classes. React.js and Vue.js fundamentals.

Example: toggle a class on click (JavaScript)

```
const btn =
document.querySelector("#menuBtn");
const nav =
document.querySelector(".nav");
btn.addEventListener("click", () => {
  nav.classList.toggle("open");
});
```

Example: counter with React state

```
function Counter() {
  const [count, setCount] = useState(0);
  return <button onClick={() =>
    setCount(count + 1)}>{count}
</button>;
}
```

Don't take this lightly

The Frontend question usually needs only **small edits** to fix the functionality, but you must read the whole template and every instruction carefully. Check element IDs, class names and expected output before you submit.

D

SYLLABUS · ASSESSMENT 4

Communication Assessment

DURATION	FORMAT	TESTS
~30 min	**7 sections (A–G) + Email**	**Verbal + Written English**

You'll receive a separate email with the timeline and login details for this round. It tests spoken and written English in a structured 7-section format, followed by a compulsory email-writing task.

Note on question count

The official notification summary lists this round as "20 Questions · 30 Minutes". Based on candidate reports, those questions are spread across the 7 sections plus the email task below.

Section	Format	What Is Tested
A · Listening Comprehension	Listen to an audio clip, then answer in one complete sentence	Active listening, sentence construction, factual recall
B · Conversation Response	Listen to a short dialogue, then give a polite, professional reply	Spoken fluency, workplace etiquette, response structure
C · Reading Aloud	Read 8 sentences aloud at a natural pace	Pronunciation, articulation, correct pausing at punctuation
D · Listen & Repeat	Repeat a sentence exactly as you heard it	Intonation matching, stress patterns, auditory memory
E · Fill in the Missing Word	Hear a sentence with a blank, then fill it in and speak the full sentence	Grammar (subject-verb agreement, tenses, articles)
F · Error Correction	Hear an incorrect sentence, then identify the error and speak the corrected version	Grammar accuracy, self-correction, language awareness
G · Speaking on a Topic	30 seconds to prepare, then 45 seconds to speak	Fluency, vocabulary range, structured thinking, confidence
Written Email Task Compulsory	Write a professional email (minimum 50 words)	Email etiquette, content structure, grammar, professional tone

Verbal parameters

Pronunciation · Fluency · Active Listening · Spoken English Understanding · Vocabulary · Articulation · Grammar

Written parameters

Email Etiquette · Content Structure · Grammar Accuracy

Section-wise Tips & Examples

A · Always answer in a full sentence

Never give one-word answers. Mirror the question's structure in your answer.

Q: Where is the meeting being held?
× "Room 4."
✓ "**The meeting is being held in Room 4.**"

B · Reply politely and professionally

Prompt: "Can you send me the report by today?"
✓ "**Sure, I'll share the report with you by the end of the day.**"

E & F · Grammar focus areas

- Subject-verb agreement, including *as well as*, *each of*, *neither...nor*
- Tense usage: simple past vs present perfect
- Conditional sentences and reported speech

× "Each of the students have a laptop."
✓ "Each of the students **has** a laptop."

G · A simple structure for 45 seconds

1. **Opening:** state your view in one line.
2. **Two points:** each with a short reason or example.
3. **Closing:** sum up in one line.

Use the 30 seconds of prep time to note your two points. Speak steadily rather than fast.

Email Task: Template & Sample

The email must have a **proper greeting**, a **body explaining the situation**, a **corrective or assurance statement**, and a **polite sign-off**. Write at least 50 words.

Sample task: You missed a team meeting yesterday. Write an email to your manager.

Subject: Apology for Missing Yesterday's Team Meeting

Dear Mr. Sharma,

I am writing to apologise for missing yesterday's team meeting. Due to an unexpected network outage at my location, I was unable to join the call on time.

I have gone through the meeting notes shared by the team and will complete my assigned tasks by Friday. To avoid this in future, I have arranged a backup internet connection.

Thank you for your understanding.

Best regards,
Rahul Verma

04

FIRST-HAND EXPERIENCE

Real Candidate Insights

This section is based on an exam experience shared by a previous candidate. Use it alongside the official pattern above.

Round 1: Psychometric + Gamified

- **Psychometric:** standard personality questions, with **no eliminations** as far as known.
- **Game 1 (Arithmetic):** select bubbles in ascending order of their result. 15 sec per question, 25 questions in total.
- **Game 2 (Pathfinding):** change directions and tiles to reach a point. About 5 min per question.
- **Game 3 (Key Collection):** collect all keys and reach the door on a 10×10 grid. About 5 min.

Elimination

About 3–4 people at that test centre were eliminated here. The gamified part decides elimination.

Round 2: Technical

Section	Qs	Focus
MS Office	7	Functions, formulas, output-based questions
Pseudocode + OOPs	10	Bitwise, 10–12 line logic, no pen and paper
DevOps, Networking & Security	14	Basic concepts and tools
Additional Technical	14	Concept-based MCQs

The most elimination-heavy round.

Round 3: Coding + SQL + Frontend

Backend (DSA)

Basic LeetCode Easy/Medium. Languages seen: Java, Python, C#. Comment out the `throw new Exception(...)` line in the Java template.

Frontend

Similar to HackerRank's React certification. Mostly needs minor edits to fix the functionality.

SQL

Joins and basic queries. No triggers, window functions or advanced topics in any set.

The candidate's final thoughts

The assessment was well-structured but tricky, especially the **pseudocode** and **gamified** sections. Focus on:

- Bitwise operations, MS Office basics, and core networking and DevOps concepts
- Staying calm in the gamified part, where the time pressure is real
- Reading every instruction carefully, especially in the coding section

05

FINAL ROUND

Interview Preparation

Candidates who clear every assessment move to the final interview. Prepare for both technical and HR questions.

Technical questions

- Explain your projects: your role, the tech stack, challenges you faced
- OOPs concepts with real-life examples
- Basic DBMS (keys, normalisation, joins) and SQL queries
- Writing simple code: reverse a string, check for a prime, find duplicates
- Basics of cloud, networking and SDLC/Agile

HR questions

- Tell me about yourself.
- Why Accenture?
- Are you willing to relocate anywhere in India?
- What are your strengths and weaknesses?
- Describe a time you worked in a team or solved a problem.

Interview tip

Know everything you've written on your resume. Use the **STAR** method (Situation, Task, Action, Result) for behavioural questions, and answer the relocation question with a clear yes, because the job location is PAN India.

06

STUDY PLAN

4-Week Preparation Roadmap

A balanced plan of about 2–3 hours a day. Adjust it to your strengths, and spend more time on the elimination-heavy Technical round.

WEEK 1

Foundations

- MS Office: Excel formulas, Word and PowerPoint features, shortcuts
- CS fundamentals: data types, operators, control structures
- Daily: 15 min of mental math
- Coding: 2 easy array and string problems a day

WEEK 2

Pseudocode & Networking

- Bitwise operators, loop and recursion tracing in your head
- OOPs pillars with examples
- OSI/TCP-IP, protocols and ports, security basics
- SQL: SELECT, WHERE, GROUP BY, HAVING

WEEK 3

Coding Depth

- Hashing, two pointers, sorting-based problems (Easy/Medium)
- SQL joins: INNER, LEFT, RIGHT, self-join with subqueries
- Frontend: DOM, events, React `useState`, small fixes
- Cloud models and DevOps basics (CI/CD, Git, Docker)

WEEK 4

Mocks & Communication

- Full timed mock tests (45 questions in 45 min)
- Practise each communication section A–G out loud
- Write 3–4 professional emails of 50+ words
- Prepare HR answers and revise your projects

Exam-Day Checklist

- Mock assessment completed and your system checked
- Stable internet connection with a backup ready
- Webcam, microphone and headphones tested
- A quiet, well-lit room with no interruptions
- Read every instruction before you start each section
- Java users: comment out `throw new Exception(...)`
- Answer communication Section A in full sentences
- Stay calm in the gamified round and keep moving

Topic Weightage: Where to Focus

Area	Priority	Why
Pseudocode + Bitwise	Very high	Tricky, no pen and paper, part of the most elimination-heavy round
Networking, Security, Cloud, DevOps	Very high	About 14 questions, and concept-based questions are easy marks if prepared
Gamified cognitive	High	An elimination round with real time pressure
DSA + SQL Joins + Frontend	High	Decides elimination and the higher-package roles
MS Office	Medium	Only 7 questions but quick to prepare
Communication	Medium	Elimination round, and practice makes a big difference

Disclaimer: This is an independent preparation guide prepared for informational purposes only. It is not affiliated with, endorsed by, or an official document of Accenture. Salary figures, eligibility and the exam pattern are taken from publicly shared notification summaries and candidate experiences, and they may change. Always verify the latest details on the official Accenture careers portal before applying.
