Let A and B be two independent events. If the probability that both A and B happen is $\frac{1}{30}$ and the probability that neither A nor B happens is $\frac{2}{3}$, then the values of P(A) and P(B), respectively, are:

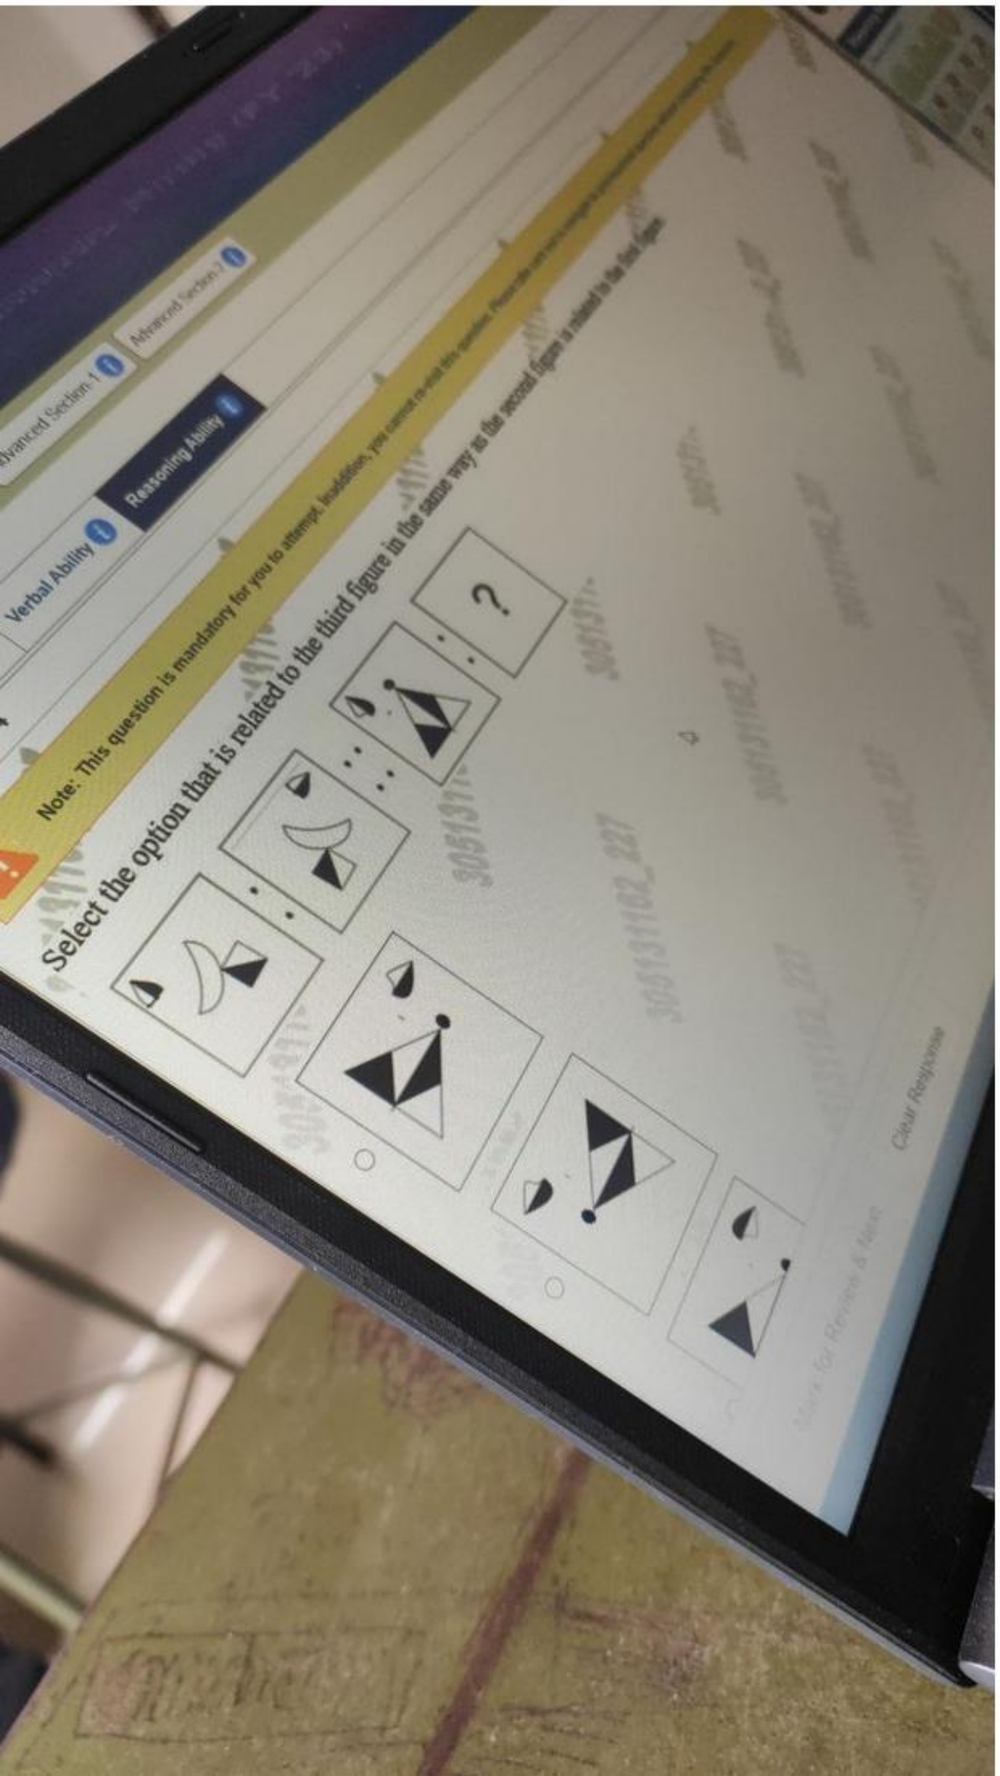

- $\frac{2}{5}$ and $\frac{1}{12}$
- $\frac{1}{15}$ and $\frac{1}{2}$
- $\frac{1}{5}$ and $\frac{1}{6}$
- $\frac{3}{10}$ and $\frac{1}{9}$

Text question: I will solve and verify this one

In a code,

P $ Q means 'P is the wife of Q',

P # Q means 'Q is the daughter of P',

P @ Q means 'Q is the brother of P',

P % Q means 'Q is the sister of P', and

P & Q means 'Q is the mother of P'.

Given below are three statements. Decide which of the statements are sufficient to establish that B is the sister-in-law of F.

I. B & C # H % E $ F

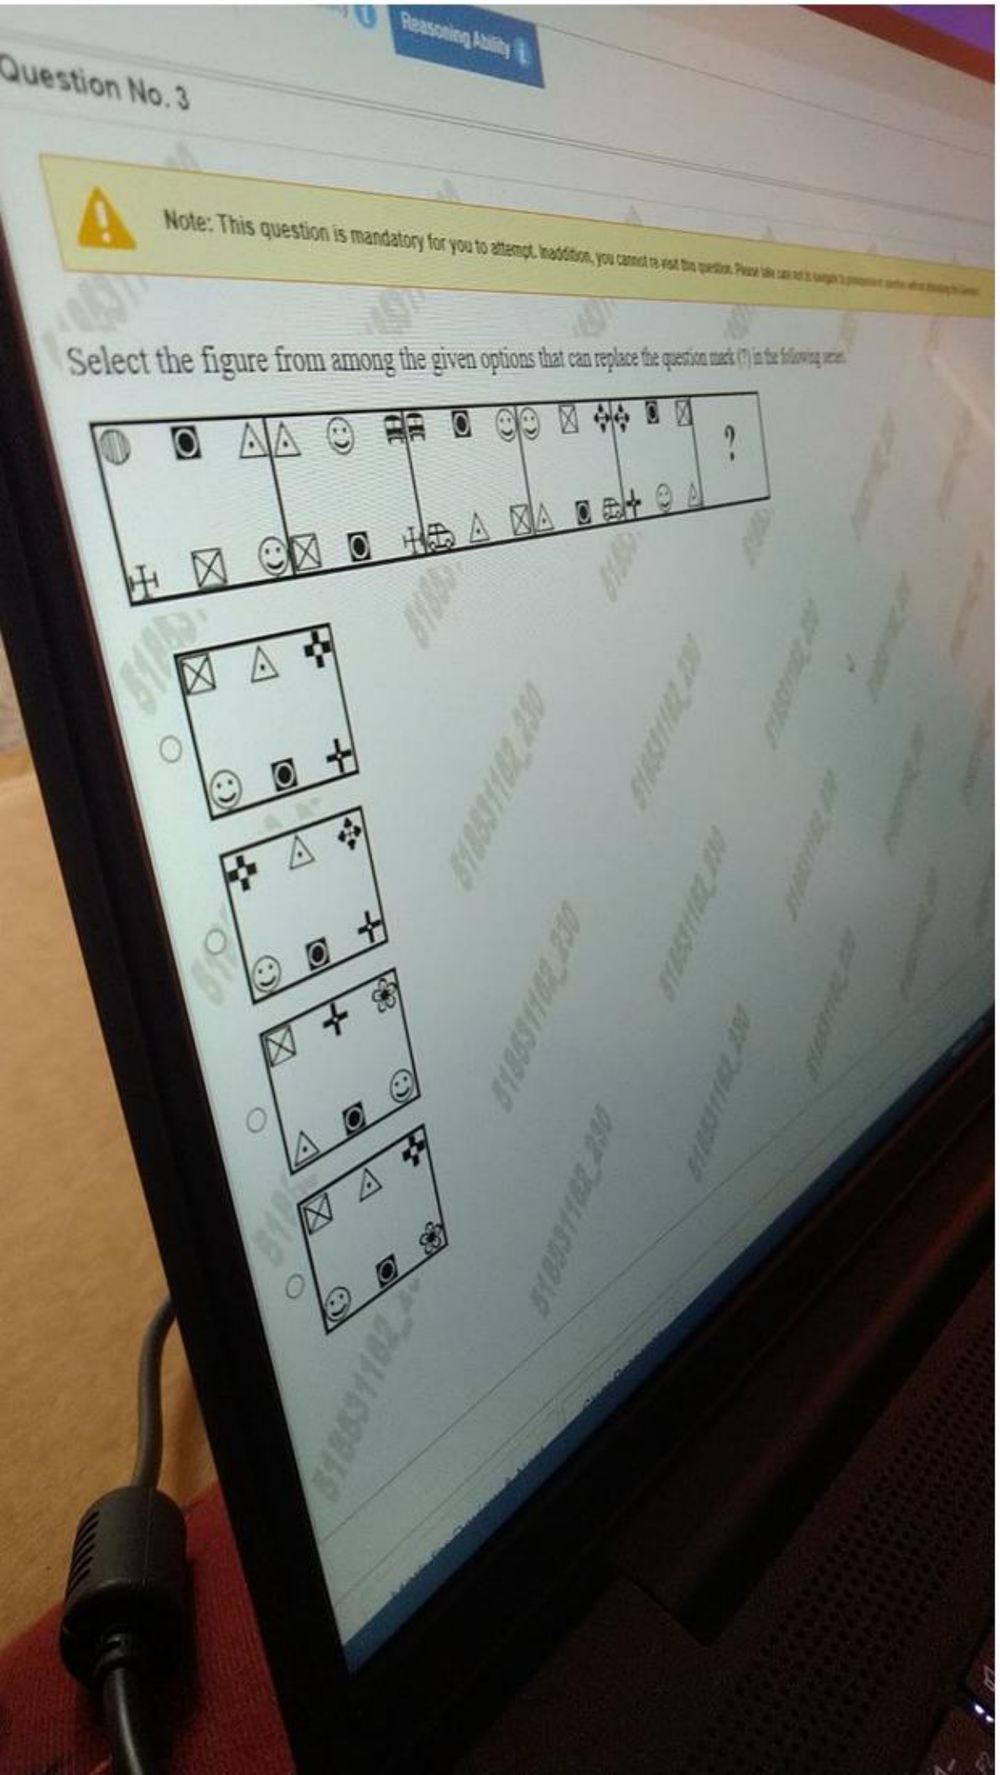

II. B @ D & C # E $ F

III. B $ G # L % J @ K

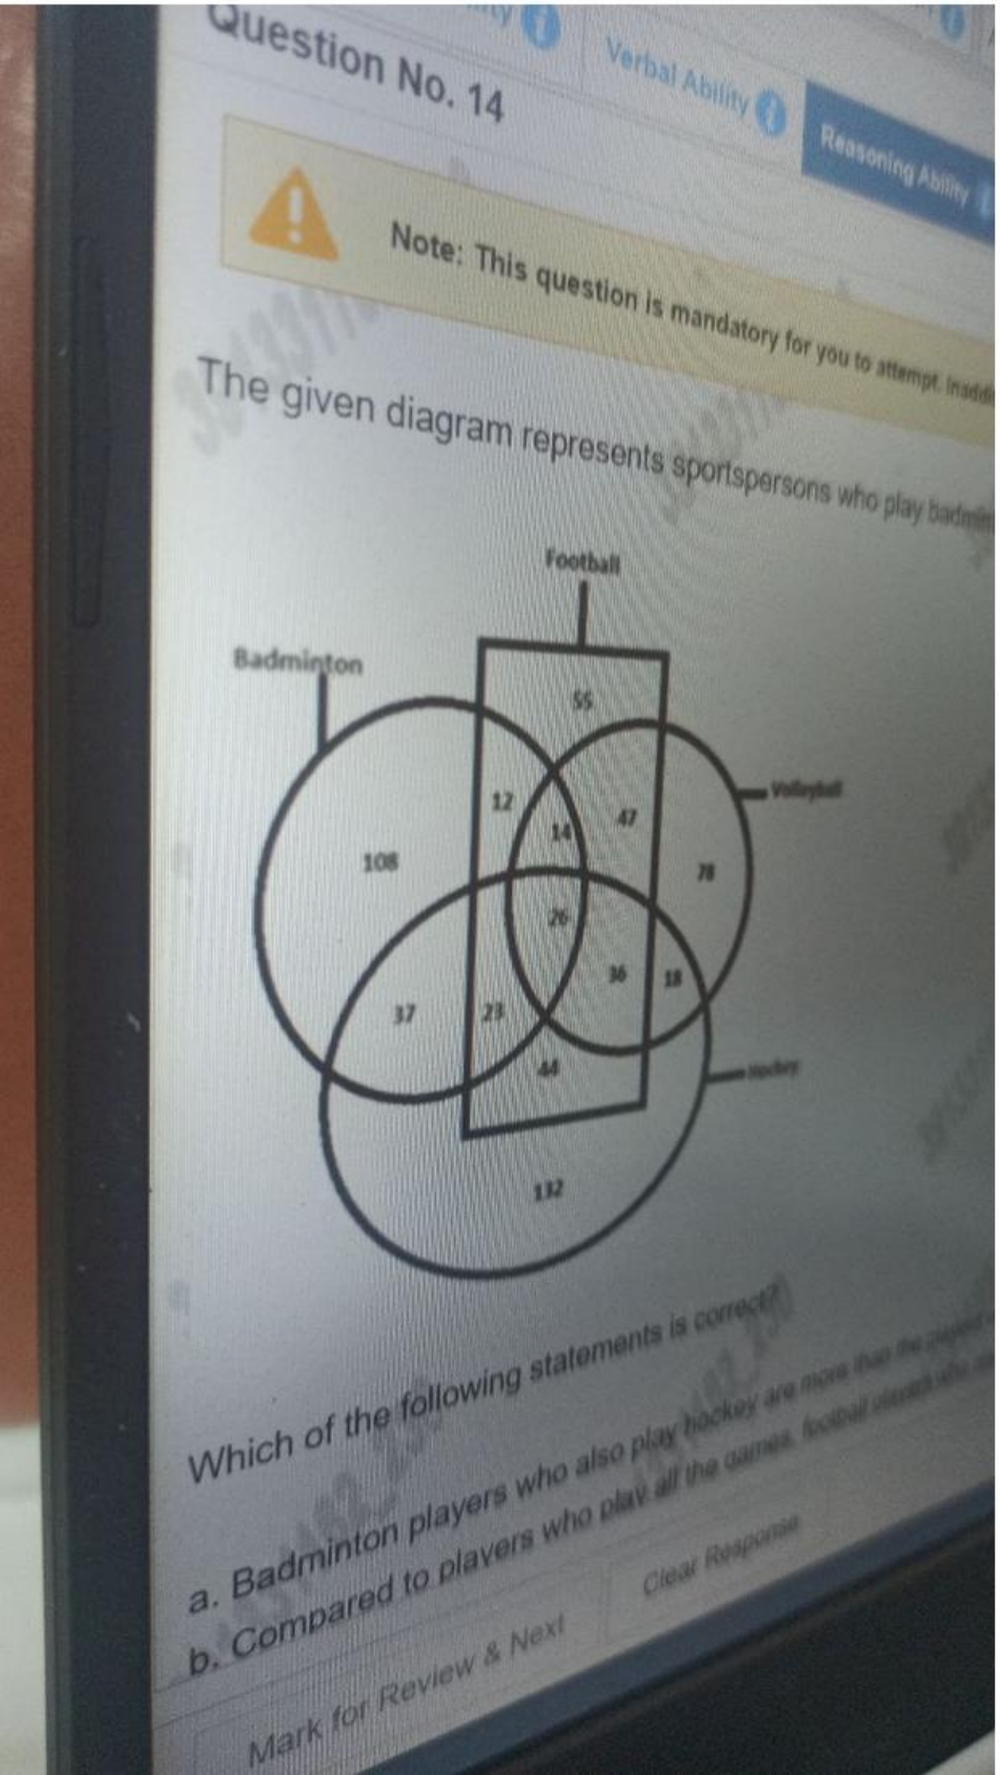

- Both I and III are sufficient.
- Only I is sufficient.
- Only II is sufficient.
- I, II and III are necessary.

In a certain code language,

P & Q means 'P is the son of Q'
P @ Q means 'P is the mother of Q'
P % Q means 'P is the brother of Q'
P # Q means 'P is the husband of Q'

Based on the above, how is K related to Q if 'K % G & T # V @ S @ N % P'?

- Father
- Brother
- Mother's brother
- Father's brother

R34 Text question: I will solve and verify this one

A question is given, followed by two statements labelled I and II. Identify which of the statements is/are sufficient/necessary to answer the question.

Question:

Let p be the total number of males and q be the total number of females in a family. What is the difference between P and q?

Statement:

I. Vipraja has six daughters, who have a brother. Vipraja is the wife of Shantanu.

II. Shantanu is the father of six daughters. Kiran's mother Vipraja is married to Shantanu. Kiran is a male.

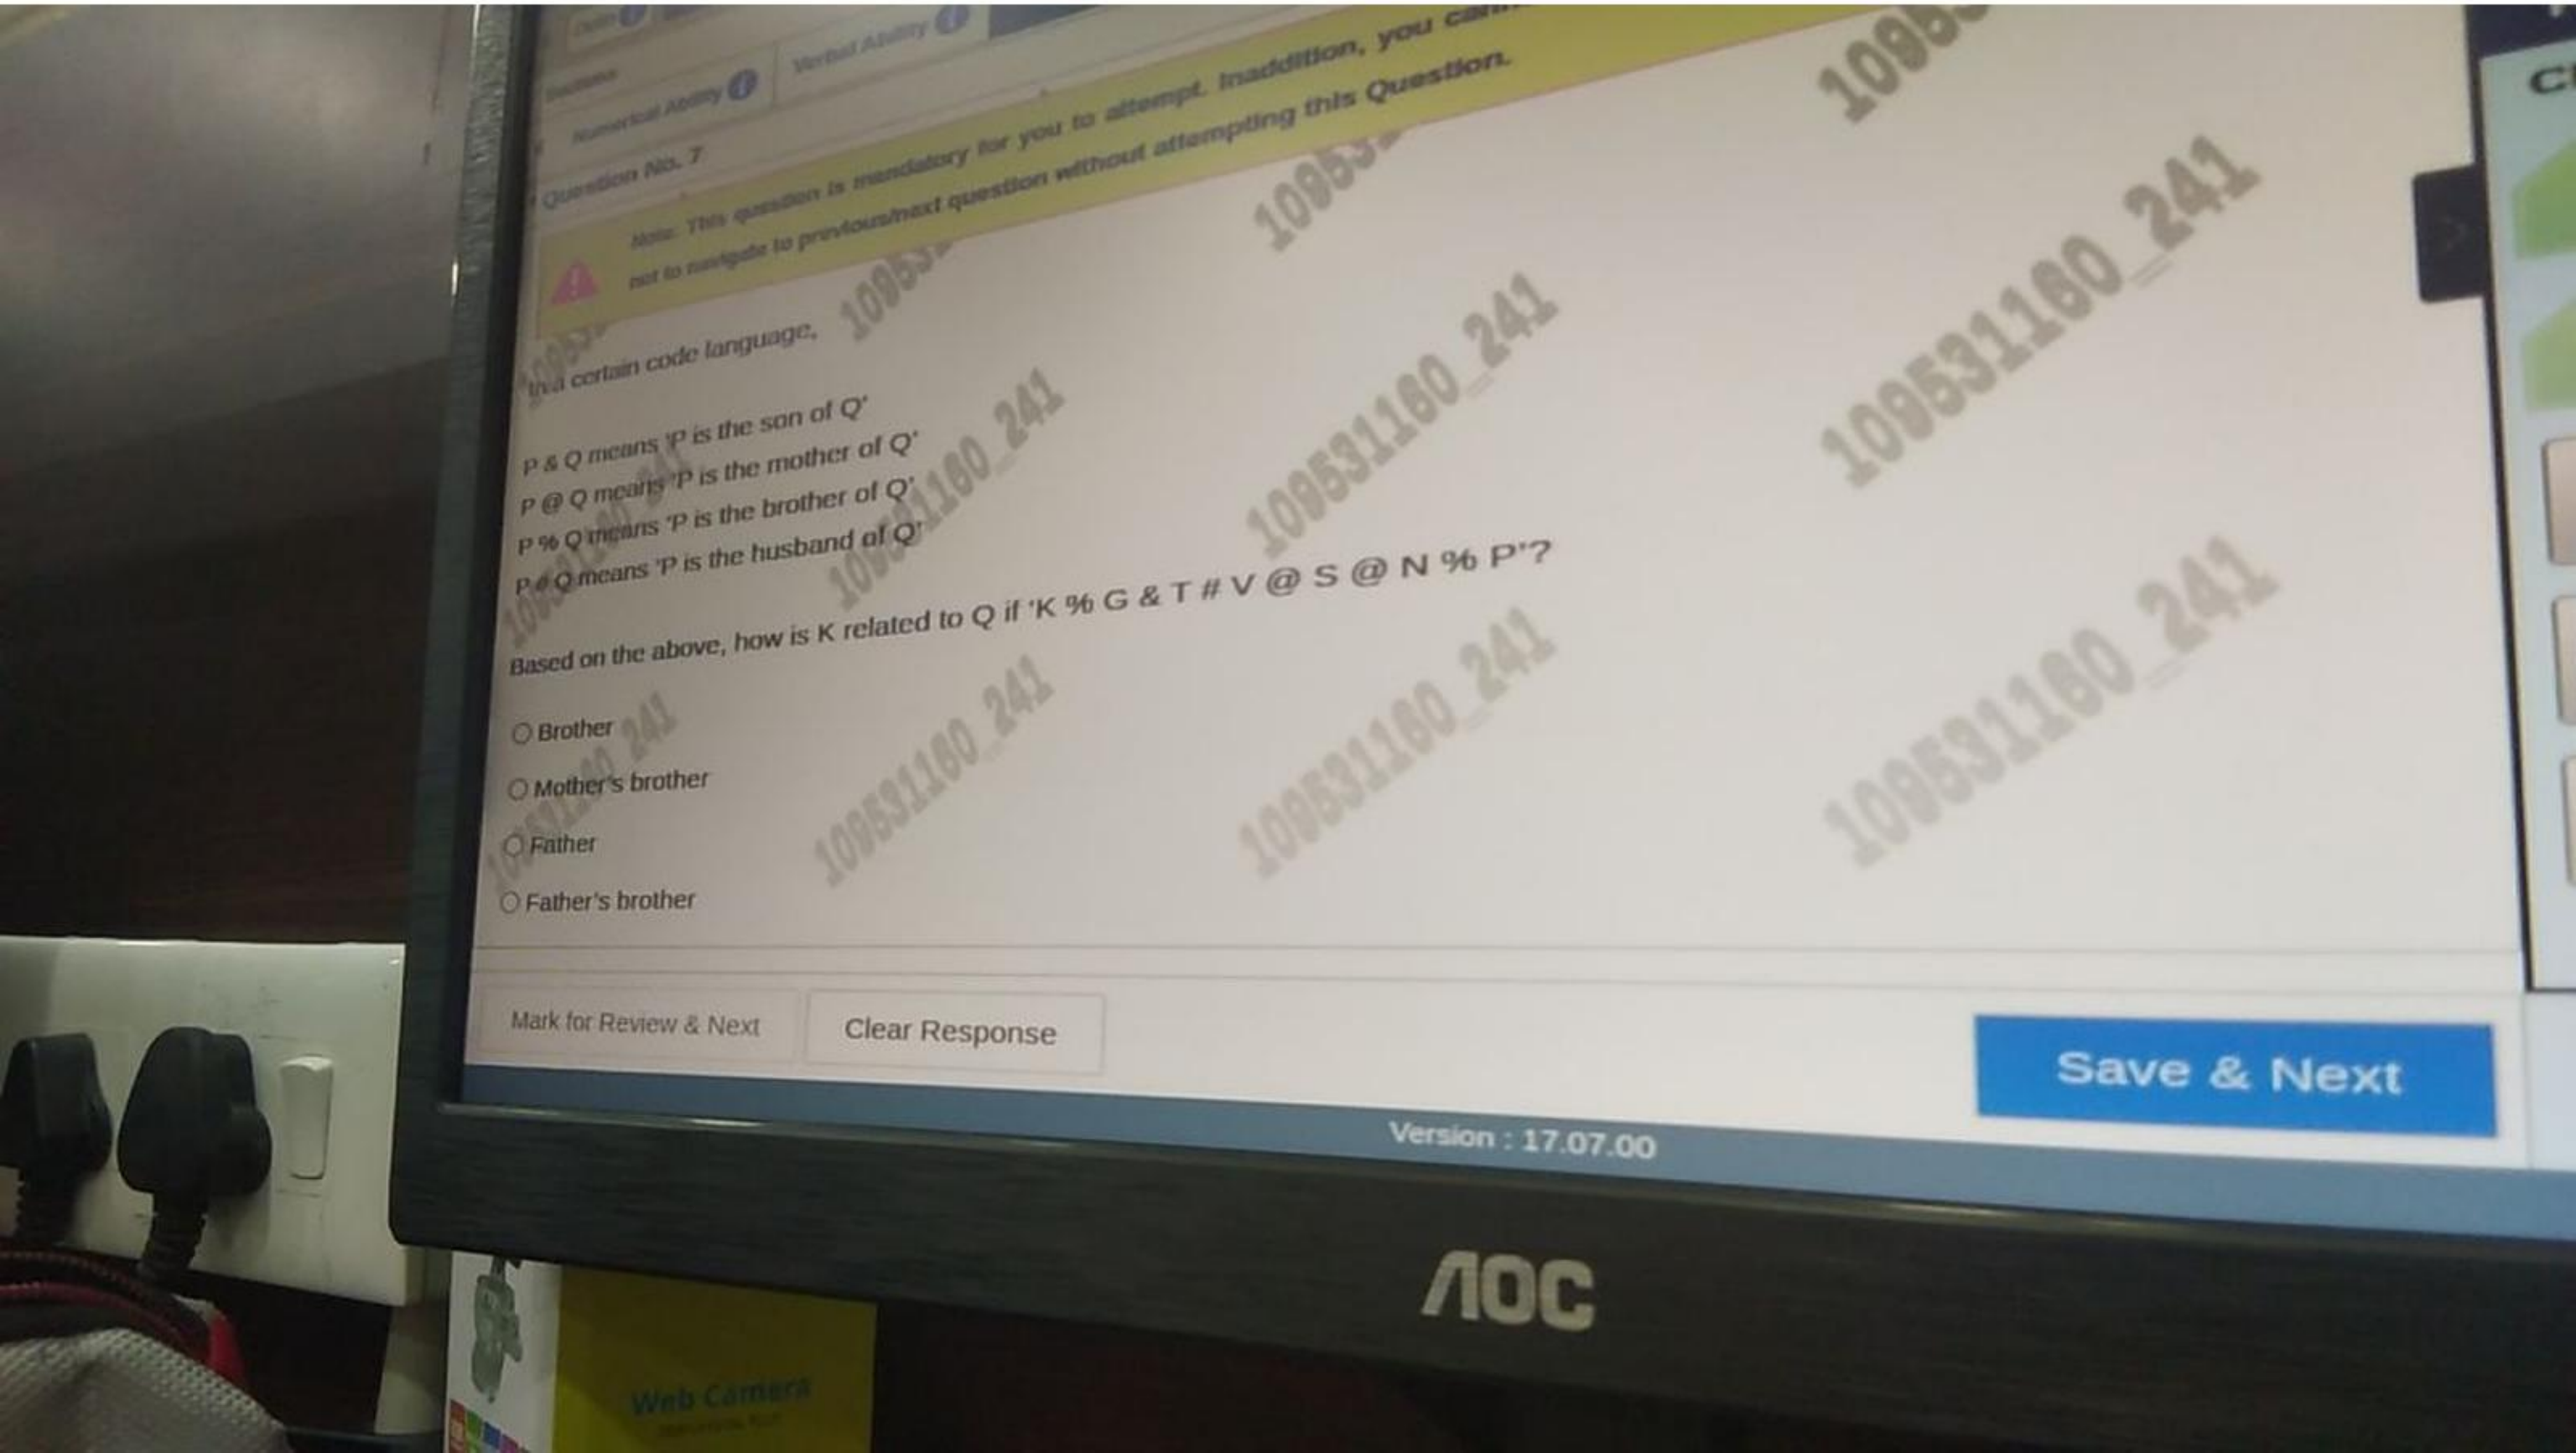

- ○ Statement II alone is sufficient.
- ○ Statement I alone is sufficient.
- ○ Both statements I and II together are necessary.
- ○ Either statement I alone or statement II alone is sufficient.
